.05

Although the cantilever chair has been a success story for over eighty years, .05 is the first model whose uncompromising form and flexible comfort surpass the archetypal chair without back legs designed by Mart Stam in 1926.

The sleek, linear shape of .05 is its aesthetic hallmark, while its construction provides for a comfortable seat. Made of resilient polyurethane integral foam, the shell adapts to the body. When the sitter leans back, the upper part of the backrest yields slightly – a pleasant sensation created by the integrated leaf springs.

Together with the typical flexing effect of the cantilever base, this makes .05 surprisingly comfortable – a quality that is fully appreciated only through use.

The cantilever base of .05 is made of stainless steel, making the chair suitable for outdoor use as well.

#### Materials

- **Seat shell:** cantilever chair with seat shell made of integral skin polyurethane foam. Shell with upholstered effect, cantilever construction on tubular stainless steel frame. Flexible backrest with integrated leaf springs.
- **Base:** non-stackable, satin stainless steel. Equipped with plastic glides for carpet or felt glides for hard floors.
- **Applications:** suitable for outdoor use.

#### DIMENSIONS (measurements are established pursuant to EN 1335-1)

.05, not stackable
