CLEANING
For daily cleaning use a wrung cloth and wipe the furniture along the veins. Do not use harsh chemicals on furniture (alcohol, chlorine, ammonia, etc.). Never use steel wool. Water, fat and alcohol-rich fluids can cause rings and spots, and should be removed immediately. The sideboard should be regularly treated, depending on use. (About 2-4 times a year).

GOOD ADVICE ON WOOD
• Avoid leaving hot or humid objects on the sideboard, as this can cause stains.

• Wood should never be covered with airtight materials for a longer period of time (ex. oilcloth).

• Wood works constantly and changes after its surroundings. Temperature fluctuations and humidity, might make the wood work and may cause cracks. This is not a flaw, but just a natural reaction of a living material.

• The sideboard should not be stored under high humidity as the wood absorbs water and expands. Furthermore it is not recommended to place the sideboard against cold and humid walls.

• Do not place the sideboard close to strong heat sources (ex. stoves and radiators) as these may damage the wood possibly make the wood expand more than it would normally do.

Please note that the warranty is only valid if the above instructions for treatment are followed correctly.
