

Innerlight, wall design Simon Pengelly 2012

FOSCARINI

Innerlight is a wall lamp that charms you even when it is switched off, thanks to the play of light and shadow that it creates. Its essential design is in actual the result of a careful study of its components: three overlapping bands that generate shadows on different planes, slightly concave but with different inclinations, to create a geometrical yet concurrently soft effect. A three-dimensional picture that changes meaning and function even more when the light is switched on. The beams of light bounce off the wall, marking the contours of the lamp and

reflecting inside each of the metal bands, with an illuminating effect that is propagated in several directions. Innerlight is a graphic and luminous presence, both in the version with white bands, where light in its pureness plays the starring role, as well as in the version with a textured finish. Suitable for both domestic use and communal areas, Innerlight unveils its dual personality in every situation: a wall sculpture and a luminaire, with a graphic value and its very own personality, without ever overbearing the other furnishings.

Innerlight, wall technical info

FOSCARINI

Description

Wall lamp with reflected and diffused light. The translucent polycarbonate wall fitting acts both as the housing for the lighting technology part as well as a support for the three steel blades, which differ in curvature and size. The steel slabs are epoxy powder coated in the white version and hand treated with a special acid-etching in the brown version. The two light bulbs are positioned on different surfaces to exploit all the available light diffusion; with electronic ballast.

Materials: translucent polycarbonate and lacquered steel

Colours: white, brown

Brightness

diffused and reflected light

Weight

net lbs 11,02
gross lbs 15,87

Packing

vol. cub. ft. 2,613
n.boxes: 2

Bulbs

– fluorescent 2x36W 2G11 type T5
electronic ballast

Certifications

 120-277V
